

February 2020 Preliminary Economic Forecast

CONTACT: Bret Bertolin, Senior Economist
PHONE: 360.534.1566

This forecast is based on a modified version of IHS Markit's January 2020 Control forecast for the U.S. economy. As usual, we have adjusted real gross domestic product (GDP) to match the Blue Chip "Consensus" GDP forecast. The forecast for GDP growth in 2020 and 2021 is now 1.9% in both years compared to 1.8% in both years in the November forecast. The Blue Chip long-range forecast has not changed since November and calls for growth rates of 1.9% and 2.0% in 2022 and 2023. February 2020 is our first forecast for 2024 and 2025. We assume real GDP will grow 2.0% in each year as in the latest Blue Chip long-range forecast.

Our oil price forecast reflects the futures markets, primarily the Brent (North Sea) oil price but also the West Texas Intermediate (WTI) benchmark. This forecast was based on the Friday, January 24, 2020 closing prices for Brent and WTI futures. The latest futures prices indicate a slightly steeper decline in oil prices than in the November forecast. As in November, the refiner acquisition price of crude is \$57 per barrel in the first quarter of 2020 however it now declines to \$50 by the end of 2023 compared to \$52 in the November forecast.

A comparison of the preliminary February U.S. forecast with the November U.S. forecast is shown in Table 2.

We have two months of new Washington employment data since the November forecast was released. Total nonfarm payroll employment rose 13,700 (seasonally adjusted) in November and December, which was 500 more than expected in the November forecast. Private services-providing sectors added 7,700 jobs in the two-month period. The manufacturing sector added 1,700 jobs of which 900 were aerospace jobs. Construction employment increased by 800 jobs and government employment rose by 3,600 jobs.

We have also incorporated another quarter of benchmark employment data from the Quarterly Census of Employment and Wages (QCEW). The new QCEW data and other revisions did not change the estimated level of total employment in October 2019. December employment is 500 (0.0%) higher than expected in the November forecast because of stronger growth from October to December.

Boeing suspended production of the 737 MAX jet in January. We assume the suspension continues through March. The effect of moving from slowdown to suspension is to reduce first-quarter U.S GDP growth by 0.5 percentage point while adding 0.25 percentage point to growth in both the second and third quarters. Boeing has indicated that affected employees will be reassigned and that there will be no layoffs or furloughs due to the shutdown.

In December, the Bureau of Economic Analysis released estimates for state personal income through the third quarter of 2019. We have incorporated the new BEA estimates as well as

additional Washington Quarterly Census of Employment and Wages (QCEW) data. Our current estimate of Washington personal income in the third quarter of 2019 is \$4.9 billion (1.0%) higher than in the November forecast due to higher than expected wages and salaries. Nonwage income was close to the forecast.

Washington housing permits increased from 48,000 units (SAAR) in the third quarter of 2019 to 54,300 units in the fourth quarter. Fourth quarter permits consisted of 26,600 single-family units and 27,600 multi-family units. The November forecast assumed an average rate of 43,200 (SAAR) units for the fourth quarter as a whole consisting of 22,500 single-family units and 20,700 multi-family units.

We expect 1.8% Washington employment growth this year, up slightly from the 1.6% rate in the November forecast. As in November, we expect growth to continue to decelerate. We expect employment growth to average 1.0% per year in 2021 through 2023, which is slightly faster than the 0.9% rate expected in November. Our forecast for nominal personal income growth this year is 4.4%, up from 3.9% in the November forecast. Our new forecast for nominal personal income growth in 2021 through 2023 averages 4.5% per year, which is down from the 4.7% rate expected in the November forecast. While personal income growth is lower than in November, the level is higher due to an upward revision to history.

A comparison of the preliminary February Washington forecast with the November Washington forecast is shown in Table 3.
